This vegetable aristocrat is rapidly attaining unusual popularity. The rapid-growing, tall-branching plant forms, within 90 days, a central head of bluish green flower-buds resembling a loose head of cauliflower. It is cooked and served like cauliflower.

**FOR HOME
MARKET OR SHIPPING**

How to Grow Beans: Plantings commence in the Lower South during January, February and March. Sow $1\frac{1}{2}$ to 2 inches deep, 3 to 4 inches apart, in rows $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart. Cultivate often until plants blossom. Deep cultivation when in bloom will cause many flowers to fall, and cultivating when plants are wet with dew may cause rust and spread anthracnose if it is present. Frequent picking insures a prolonged bearing season. Two pounds will sow 100 feet of row; 60 pounds (bushel), an acre.

TENDER *Rich Red* BEETS

An important commercial truck crop in the South. Beets are also a good home-garden vegetable. The young plants are considered to be superior to spinach and turnips for greens. Reuter's Beet Seed is carefully bred and selected to produce smooth, uniform, beautifully formed, and attractive blood-red Beets of the finest quality.

Culture. Space the rows 18 to 24 inches apart. Work soil well and cover seed 1 inch deep. A rich sandy loam is preferable, but nearly all soils will produce Beets if sufficiently fertilized and properly cultivated. When well started, thin plants to 3 to 4 inches apart. Beets are usually more tender and succulent when about 2 inches in diameter. One ounce will sow 50 feet of row; 5 to 6 pounds to an acre.

It is the result of ten years of inbreeding and re-selection to produce a stock that has marvelously rich blood-red meat all the way through. It has no white or light colored zones in the flesh. Remains tender and of the highest quality until roots are fully grown. It cans red with no browns or purples. Superior for the table. Its globe-shaped roots are uniform in shape, color and size, and its uniform, small, slender and erect tops appeal to the commercial grower and shipper. **Pkt. 10c; oz. 20c; ¼ lb. 60c; lb. \$1.85; 5 lbs. \$8.50.** Not prepaid: 10 lbs. \$14.00; 25 lbs. \$32.50.

LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than ½ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

315 Great Lakes. 82 days. 1944 All-America Bronze Medal Winner. This outstanding Lettuce of Iceberg type has proven itself remarkably adapted for the South. It will stand the heat and sun, is unusually slow to go to seed and is very resistant to tip-burns. The thick leaves fold well over the heads. Heads have a very large frame, with a solid, compact base, are round in shape, medium green in color and crisp and tender. The plants are vigorous, producing heads of giant size. Pkt. 15c; oz. 55c; ¼ lb. \$1.65; lb. \$5.00; 5 lbs. \$22.75. Not prepaid: 10 lbs. \$43.50.

FLORIDA ICEBERG

Enjoy "Vine Ripened" Cantaloupes

Culture: Prefer rich, sandy soil and plenty of sunshine. When the ground has become thoroughly warm, spade in well-rotted manure about $\frac{1}{2}$ foot deep, at the rate of a shovelful for each hill. Drop 8 to 10 seeds in slightly raised hills 4 to 6 feet apart each way, covering with $\frac{1}{2}$ to 1 inch of fine soil. When plants have produced their rough leaves, thin to the 3 or 4 strongest in each hill. Practice frequent shallow cultivation until vines cover ground.

Commercial growers start the seed in hotbeds, in paper pots, or dirt-bands and later transplant to the field. Earlier planting can be accomplished by use of Hotkaps (see page 25). For fungus diseases in general, spray frequently with Fomate (see Insecticide page No. 58). One ounce will sow 50 hills; 2 to 3 pounds an acre.

Pkt. 15c; oz. 45c; $\frac{1}{4}$ lb. \$1.25; lb. \$3.50; 5 lbs. \$16.25.

113 IMPROVED PERFECTO

95 days. This variety has achieved great popularity. HOW TO GROW 'EM

Rich sandy loam soils are considered best for Watermelons but good crops are grown on any well-drained, fertile soil. Adding well-rotted manure to soil gives the plants a good start and to commercial growers we recommend an application of 600 to 800 pounds of commercial fertilizer (analyzing about 4 per cent ammonia, 12 per cent phosphoric acid, and 4 per cent potash) to the acre. Space hills at least 10 feet apart. This method will give about 360 hills to the acre. When the soil has become warm, drop 6 to 8 seeds in each hill and cover about 1 inch. Later thin to 2 to 3 of the largest plants. One ounce will plant 25 hills; 1½ to 2 pounds per acre.

DARLINGTON

615 Wherever introduced, Darlington has won top honors as the choicest of all Watermelons for local markets and home use. Beautiful and showy, symmetrical in shape and of large size Darlington commands attention wherever seen. The rind is striped, irregular dark green with alternating ivory colored stripes. The brilliant red flesh is very tender and melting. It is wonderfully sweet and luscious, with an enticing flavor and appetizing aroma when cut. The seeds are very few in number as compared with most varieties. Darlington has proven itself less susceptible to Anthracnose than most varieties. It is a prolific bearer and practically immune to sunburn. We unhesitatingly recommend Darlington as one of the best melons ever developed for home and local market. Mustard is not only used as a condiment, but the large green leaves are used as a salad, or boiled like spinach and served as "greens." They are fully as healthful and nourishing as spinach. Produces an abundance of tender, succulent leaves in four to five weeks.

Culture. Sow frequently in rows 12 to 18 inches apart, covering seed $\frac{1}{2}$ inch deep. Thin plants to 5 to 6 inches apart in the rows. Give clean cultivation. Luscious Tomatoes

No garden should be without its quota of Tomatoes. They require little care and yield heavily in a small space. No vegetable can be put to more uses, cooked or in salads, than Tomatoes. They are rich in vitamins, and valuable as an appetizing dish in many ways.

Maturity dates given are from the setting of plants to marketable fruits.

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit. Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

Wilt-Resistant

TOMATOES

The wilt-resistant varieties offered on this page deserve your serious consideration whether you grow for home use, local market or for shipping. Fusarium Wilt and Nail Head Rust are fungus diseases that cause severe losses, especially in the lower South. For safety sake, whether your land is wilt-infested or not, you should plant Tomatoes that are definitely wilt-resistant. Reuter's Wilt-Resistant Tomatoes lead all others in the principal commercial shipping sections of the South.

Pkt. 15c; ½ oz. 55c; oz. 95c; ¼ lb. \$2.75; lb. \$9.00; 5 lbs. \$42.00. Not prepaid: 10 lbs. \$81.00.

PETUNIA, Fire Dance

STOCKS, Seven Weeks

GLADIOLUS

SALVIA, Fireworks

AGERATUM

1104 Blue Mink (Tetra) If you want beautiful giant trusses of fluffy blue flowers, you must try this new tetraploid Ageratum. The plants are strong and husky growing to a height of 5 to 6 inches. An excellent item for edging or border use particularly since it is upright in growth and compact and even in habit. Pkt. 50c.

STOCKS

1952 Seven Week (Trysomic) This new race of Branching Stock is noted for its extreme earliness. The attractive flower spikes offer a brilliant color range from white through pink and rose, deep crimson, dark blue and purple. Better than 80% of the flowers will be "doubles" if properly handled. The plant first throws a central spike of bloom about 6 inches high and then proceeds to produce numerous side branches throughout the growing season. Eventually the plant achieves a height of 12 to 15 inches. This stock will thoroughly please you. Pkt. \$1.00.

2252 Appleblossom (Pat. applied for) Just now being introduced in 1956. A gladiolus of the utmost delicacy of coloring—the predominant hue being snowy white with a faint touch of cream in the throat and an exquisite flush of cool rose pink at the edges of the petals. Up to eight or ten florets, about five inches in diameter, are open at a time on spikes up to five feet tall. Appleblossom is a new conception of gladiolus beauty and is vigorous and easy to grow. Each \$1.00; 3 for \$2.50; 6 for \$4.75.

PETUNIA

1811 Fire Dance (FI Hybrid Grandiflora) A new color combination for petunias combining a bright rich, salmon-scarlet with a yellow throat. This FI hybrid variety is the result of an intensive breeding program and is deserving of a place in your garden. Pkt. \$1.50.

SALVIA

HOW TO PLANT YOUR ROSES

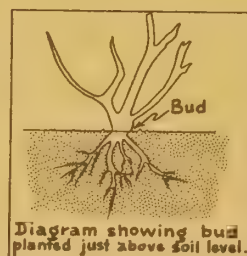

Diagram showing bud planted just above soil level.

In preparing to plant, make your rose bed not over 2½ feet wide and have it elevated for good drainage. Space the bushes about 18 to 24 inches apart, depending upon the variety. The hole should be dug 12 inches deep and 14 inches wide. Locate the budded spot or swelled knot at the bottom of the stem and plant so that it is just above the soil surface. Allow the roots to take their natural position and sprinkle fine soil over the roots, firming the soil frequently. When planting is completed leave a "moat" around the bush which should be filled with water. After the plant has become established level this "moat".

GRASSES

FOR LAWNS AND FARMS

CARPET GRASS

830 Carpet Grass is a valuable permanent grazing grass for the South, spreading by creeping stems which root at every joint. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda, it is palatable and relished by all livestock.

It stands close grazing and heavy trampling. Can be sown over your present pasture, creek bottom, or cut-over woodland without plowing or disking. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic and White Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. It is a drought-resisting grass and furnishes fine grazing during long dry spells. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks, and golf courses. Lb. 75c; 5 lbs. \$2.80. Not prepaid: 10 lbs. \$3.50; 100 lbs. \$32.00.

St. Augustine Grass

Perennial grass for shady lawns in the lower South. It is a deep green, broad-bladed grass, creeping by means of surface runners. Seed is not available, but lawns are established by rooted runners, laid down in parallel trenches about 8 to 10 inches apart. A bushel will plant 200 square feet. Write for free leaflet. Not prepaid: Bus. \$2.25; 10 bus. \$20.00. Available April to October.

Zoysia Japonica Grass

828 This fine-leaved lawn grass will thrive well both in the full sun and in dense shade. Because it grows only 3 to 4 inches tall, it requires little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to chinch bugs and has a tendency to crowd out crab grass. Formerly this grass could not be planted from seed, for seed production was exceedingly difficult; however, much experimentation and laboratory work has now made this excellent lawn grass available to you in its easiest planting form—seed. Full directions for planting with each purchase. Lb. \$3.65; 5 lbs. \$17.25. Not prepaid: 10 lbs. \$32.00; 100 lbs. \$290.00.

BUFFEL GRASS

846 The perennial bunch grass that rejuvenates wornout fields, checks erosion and provides excellent quick-growing hay and grazing. As green forage or as hay its protein content is very high. Grows well on sandy or heavy soil and stands severe drought.

Plant in the Spring at the rate of one to two pounds of seed to the acre in rows 36 inches wide. Use a firm bed and seed not over $\frac{3}{4}$ inch deep. $\frac{1}{4}$ lb. 95c; lb. \$2.75; 5 lbs. \$11.00. Not prepaid: 10 lbs. \$19.50.

Kentucky Blue Grass

836 Excellent lawn grass; ideal for golf fairways and putting-greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 40 pounds per acre for pasture. Plant in the fall and early spring. Lb. \$1.20; 5 lbs. \$4.80. Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

Fancy BERMUDA Grass

829 The most dependable and permanent grass for lawns, golf courses and athletic fields. Makes a tough, even clumpless turf that recovers quickly after cutting. Lasts for years; stands a long, hot, dry summer without injury. It is by far the most important pasture grass in the South. Succeeds on nearly all types of soil, even if poor and sandy. Loamy bottom lands well drained are best. As a grazing and fattening grass has few equals. It is palatable and relished by all live-stock. Close grazing improves its quality. On good soil will furnish two or more cuttings and frequently up to 5 tons of hay per acre. Grows well with Lespedeza and Dallis Grass, and follows winter growing clovers, such as White Dutch, Bur. Medic, Hop and Persian exceptionally well. Germinates in 20 to 30 days with proper soil moisture. Sow broadcast and cover very lightly, when ground is thoroughly warm and only on well-prepared land. Sow 12 to 15 pounds to the acre for pasture; 4 lbs. to 1,000 square feet for lawns. The seed is very small and to facilitate equal distribution may be mixed with dry soil to increase bulk. The grass spreads rapidly over the ground by means of its aggressive root system.

The Bermuda Grass Seed we offer is the fine leaf cultivated turf-producing strain, testing 98% pure or better. Reuter always offers the best. Lb. 70c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$3.40; 100 lbs. \$31.00.

Hulled BERMUDA Grass

826 Reuter offers his Extra Fancy Bermuda Grass with the hull removed, a process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. In fact, it germinates almost as quickly as Rye Grass. It is the same grade as our famous Fancy Bermuda offered above with the almost watertight hulls removed, previously believed impossible. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn. It is revolutionizing Bermuda lawn planting with its quick, positive results.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 2 lbs. to each 1,000 (50x20) square feet of lawn, fairway, athletic or aviation field. Use 10 pounds per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify HULLED SEED when ordering, otherwise the unhulled seed will be shipped.

Prices: Lb. 90c; 5 lbs. \$3.40. Not prepaid: 10 lbs. \$4.80; 100 lbs. \$44.00.

American RYE Grass

840 An annual, tall, broad, flat-leaved deep green grass very valuable for winter lawns and pastures. Produces within 3 weeks, or less, a beautiful green winter lawn. It is one of the most important and valuable winter pasture grasses for the entire South. Grows from 2 to 3 feet high. Withstands severe winters perfectly. On mellow soils no preparation is needed—simply sow seed and lightly cover. Requires 10 pounds per 1,000 square feet for lawns; 25 to 30 pounds per acre when used alone for pasture. Spring sowings are conducted during January and February. Reuter offers seed of the highest quality. 5 lbs. \$1.45. Not prepaid: 10 lbs. \$1.35; 100 lbs. \$10.50.

DALLIS GRASS

834 (*Paspalum Dilatatum*.) One of the most valuable permanent pastures grasses in the South. Comes nearer growing year-round than any other grass. Makes its fastest growth on moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought well. We know of no better grass to withstand flood conditions. Light freezes do not injure this grass.

Dallis Grass grows well with Lespedeza, also White Dutch, Alsike, Hop, Black Medic and Persian Clover. The spring planting commences in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834 Imported Seed. (50% or better pure live seed.) Lb. \$1.35; 5 lbs. \$5.75. Not prepaid: 10 lbs. \$9.25; 100 lbs. \$87.50.

RED TOP Grass

833 Stands wet weather and overflowing comparatively well. Will hold well during the summer if cut often. Sow in the spring until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pasture. Cover seed lightly. Lb. \$1.15; 5 lbs. \$4.70. Not prepaid: 10 lbs. \$7.25; 100 lbs. \$67.50.

PENSACOLA BAHIA

SUDAN GRASSES

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. Lb. 80c; 5 lbs. \$3.00. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$34.00.

SWEET SUDAN

824 Sweet, juicy and more palatable to livestock than the Common Sudan, and even after the crop reaches maturity the stalks and stems are relished by cattle. Sweet Sudan has more and broader leaves, heavier and taller stalks and stools much heavier than the Common variety. It is later in maturity than the Common Sudan, thereby producing more vegetative growth and remaining green and growing longer than the Common. More grazing can, therefore, be expected. When planted side-by-side with Common Sudan, the cattle kept the Sweet Sudan grazed to the ground, while the Common Sudan was grazed down to the height of one foot. It's resistant to leaf-disease. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$1.50; 100 lbs. \$12.00.

COMMON SUDAN

825 This valuable quick-growing, heavy-producing grass should be grown on every farm in the South. Yields from 4 to 10 tons of cured hay per acre. The hay is relished by cattle, horses, and sheep. Stools out wonderfully after the first cutting. An excellent catch-crop, requiring only 45 days before the first cutting. It stands more hot, dry weather than any other pasture, and can be cut as often as four times a season. Cut for hay when in bloom. May be grown with cowpeas and soy beans. When ground becomes warm sow 5 to 6 pounds to the acre in rows; 20 to 25 pounds broadcast. Lb. 50c; 2 lbs. 85c; 5 lbs. \$1.70. Not prepaid: 10 lbs. \$1.45; 100 lbs. \$11.50.

KENTUCKY 31 FESCUE

823 Certified Kentucky 31 is a perennial bunch grass. The bunches increase in size and eventually make a close tight sod. It is best suited for use as permanent pasture grass since it prevents erosion, and holds up livestock in wet weather, and produces large amounts of succulent pasture the year around. It will grow almost anywhere but the better the soil the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Lb. 60c; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$21.00.

823-A Uncertified (98/90) Lb. 55c; 5 lbs. \$2.00. Not prepaid: 10 lbs. \$2.20; 100 lbs. \$19.00.

PANIC GRASS

845 Giant Blue Panicum is a marvel among pasture grasses. It is a deep-rooted perennial bunch grass that forms good sized, tough crowns by means of thick, short, bulbous rhizomes. The plants may reach a height of six feet under the best of growing conditions. The bottom half of the stem has large nodes and body internodes. Branching from the lower nodes is common if the main stem is cut off. The panicles are terminal on the stems and branches. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drought. It prefers heavy loam soils of high fertility and needs irrigation if annual rainfall is under 25 inches.

Panicum is a sweet grass used for hay and pasture. It is rich in protein and food value and yields per acre more than double that of Alfalfa. Seed should be planted in moist soil and covered lightly using only one pound per acre. ¼ lb. 50c; lb. \$1.20; 5 lbs. \$4.85. Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

JOHNSON GRASS

827 Recognized as one of our most valuable hay and forage plants, although considered a pest in many parts of the South. No other grass makes such enormous yields of hay—3 to 4 cuttings a season—and the hay compares favorably with timothy and alfalfa. It should be cut or mowed just when the seed-heads begin to form. There is always a great demand for Johnson Grass hay, as it is relished by all stock, especially horses. In places where it can be controlled, there is no other perennial grass that makes as good yields of hay. Resists drought remarkably well. Sow 40 pounds to the acre from early spring until early fall to give you a permanent summer pasture and a hay-crop forever. Mixtures of Johnson Grass and other crops, such as oats and cowpeas, also make a good quality of hay. Lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

TEOSINTE

913 A giant forage plant. The yield is truly enormous and 50 tons of green forage per acre is not unusual. Grows 8 to 12 ft. high, sending up from 20 to 50 stalks from a single root. If harvested when 4 to 5 ft. high, 2 or 3 cuttings may be obtained in a single season. Plant during April and May in drills 3½ to 4 feet apart; 2 to 3 pounds plants an acre. Crop doubtful—write for prices.

BENE

914 One of the finest crops for poultry feed and highly recommended for planting to attract quail and partridges. It's a hardy, tall, annual herb growing 4 to 7 ft. high, producing flowers followed by seed pods which scatter oily seeds in great profusion. Frequently planted to bait dove fields. Plant in rows out in the woods and also in cotton and cornfields at the last cultivation at the rate of 5 lbs. per acre. DELTAPINE 15

Reuter is offering this wonderful strain of Deltapine Cotton, Deltapine 15. Deltapine 15 is very productive and has a high lint percentage, or gin turnout, which has always distinguished the Deltapine variety. Whereas the length of the staple is the same as the older Deltapines this strain (15) has somewhat greater length uniformity. It also has stronger fiber; these two qualities account for the fact that 15 has definitely better spinning quality than any of the previous Deltapines.

The cotton industry has now reached the stage in which manufacturers are informing themselves on the adaptability of different cottons for their particular purposes. Not only must a cotton yield well, but it must consistently pick out in relatively good grades and, when spun into yarn must have good strength and good appearance. The great improvement in Deltapine Cotton has been attained without a corresponding loss in yield per acre.

Louisiana State Certified Blue-Tag Cotton Seed. Not prepaid: 32 lbs. (bus.) \$3.25; 100 lbs. \$7.95; 300 lbs. \$23.25.

Originator's Registered Cotton Seed. Not prepaid: 100 lbs. \$15.00; 300 lbs. \$44.25.

Crotalaria

OUR CROTALARIA SEED IS SCARIFIED

Reuter's Crotalaria seed is hand-picked, machine cleaned and cured in the most approved manner. Our reputation stands back of every bag we sell and the seed will represent the very best this season has produced. In recent test plantings, properly cured and scarified seed produced eight times as many plants per square yard as compared to ordinary field-run, non-scarified seed.

885-A Spectabilis, Early Strain. A new early strain in every way equal to the common variety, but matures three weeks earlier and more dwarf in growth. Makes nearly as heavy a tonnage. Can be sown from March until July. More desirable for planting in fruit and pecan orchards and will mature seed and can be plowed under before the nuts fall. Customers in upper South should plant this type. Lb. 70c; 5 lbs. \$2.75. For larger quantities, see price-list on page 60.

885 Spectabilis, Late. A remarkable new summer cover crop and soil builder yielding 40,000 pounds of green weight per acre. The humus produced by such yield is of tremendous value. When turned under is the equivalent of 800 pounds of Nitrate of Soda. It is not recommended for hay. Requires no fertilization, no liming, no inoculations. Reseeds itself under favorable conditions. Broadcast just before the last cultivation of cotton or corn. It will just about double the crop yields following it. Thrives on any soil. Broadcast 10 to 15 pounds on well-prepared land from March through June, harrowing in not over 2 inches, while the soil is moist. Lb. 70c; 5 lbs. \$2.75. For larger quantities, see price-list on page 60.

886 Giant Striata. This variety is outstanding for its rapid and mammoth growth which makes it possible to resist weeds and grasses. It furnishes an unusual amount of green manure and nitrogen to the soil which will be of immense benefit to all subsequent crops. Sow from March to July on well prepared land at the rate of 10 to 15 lbs. per acre. Lb. 70c; 5 lbs. \$2.75. For larger quantities see price-list on page 60.

BROOM CORN

723A Standard Evergreen. Grows 7 to 12 feet tall, and the brushes are usually from 12 to 24 inches long. The brush should be harvested when the natural green color extends from the top of the fiber to the base of the head. 1/4 lb. 25c; lb. 65c; 5 lbs. \$2.50. Not prepaid: 10 lbs. \$2.90; 100 lbs. \$26.00.

Sesbania

884 Macrocarpa. A great summer growing fertilizer crop. Loosens and emulsifies the soil. Citrus growers in the Imperial and Rio Grande Valley have found it superior to all other fertilizer crops, making more tonnage, quicker growth and shading the young trees during hot weather. Florida citrus growers are commencing to plant it liberally. Trucker growers are planting it in a bigger way. It requires from 8 to 10 weeks from time of germination to time of plowing under. It should be plowed under when the seed is in the dough. Attains a height of from 8 to 10 feet. Individual plants will make a limb spread of from 4 to 6 feet. The foliage is like an Acacia, with finely cut small leaves. They decay very rapidly. The root growth is very rapid as much as 3 feet from tip to tip, and 18 inches deep in eight weeks. They are entirely covered with nodules. It has no known value other than as a fertilizer crop, or for game preserves. Quail are very fond of the seed, which are produced in abundance, and are capable of lying on the ground a long while, and remaining in good condition. Citrus growers usually drill 30 lbs. of seed to the acre, between the trees. Trucker growers should sow 40 lbs. per acre and give a light covering. Cotton and corn farmers have found Sesbania the solution of keeping up their soils, sowing at the rate of 12 to 20 lbs. per acre. For the period of growth, we know of no legume which is equal as a producer of nitrogen and humus. Cultivation readily kills it. Plant only scarified seed that germinates readily. Lb. 55c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$1.95; 100 lbs. \$16.50.

MUNG BEANS

710 Jumbo. The roots are crowded with nitrogen gathering nodules and it is truly a great crop to turn under for building up your soil. For hay, plants grow erect and bushy not lodging except on rich bottom land. Grows 3 to 5 feet high, easily cut and cured—stock eat it clean with less waste than peavine hay. Yields run from 500 to 1,000 pounds per acre. Mung Beans do well on sandy to heavy clay soil that will grow any kind of grain crop. Plant 3 to 5 pounds per acre in 3 1/2-foot rows. Broadcast 10 to 15 pounds per acre. Matures in 90 to 120 days. 1/4 lb. 25c; lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$21.00.

KUDZU VINE

888 Rapidly gaining in popularity Kudzu is used primarily for soil erosion. However, more recently it is being used for pasture in conjunction with Sericea Lespedeza. Broadcast on prepared soil when soil is warm at the rate of one pound per acre. Pkt. 15c; oz. 40c; 1/4 lb. \$1.15; lb. \$3.50; 5 lbs. \$16.25.

Persian Clover

Melilotus Alba

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during spring and early fall at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated for best results with NITRAGIN. Lb. 60c; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$2.70; 100 lbs. \$24.00.

Certified LADINO CLOVER

720 Certified. Similar in appearance and habit of growth to the common White Dutch Clover, but a much stronger and taller grower. It is excellent for hay, very rich in protein and is relished by all kinds of livestock. Also fine for pastures and if not grazed too closely will remain green until Fall. Sow 2 to 3 lbs. to the acre if planted with grasses, 5 to 6 lbs. if sown alone. Lb. \$1.25; 5 lbs. \$5.40. Not prepaid: 10 lbs. \$8.80; 100 lbs. \$83.00.

HUBAM CLOVER

721 An annual White Blossom Sweet Clover resembling the biennial white (Melilotus Alba) in appearance. From a slow start it will reach a growth of 7 to 8 feet in a few months. Excellent pasture and hay clover. Also fine for bee keepers. Will reseed itself. Seed should be inoculated and the soil well limed for best results. Sow 15 pounds to the acre. Lb. 60c; 5 lbs. \$2.20. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$21.00.

ALSIKE CLOVER

736 On the borders of marshes, seepy hillsides, and places too wet for other Clovers this plant makes its best growth. It is of no value on dry soils. Sow during fall and spring, at the rate of 6 to 8 pounds per acre. Inoculate seed with NITRAGIN. Lb. 85c; 5 lbs. \$3.35. Not prepaid: 10 lbs. \$4.70; 100 lbs. \$43.00.

Alyce Clover

**THE GREATEST
SUMMER CLOVER
FOR THE SOUTH!**

ALYCE CLOVER

727 Like Lespedeza it is a summer annual reseeding each fall and volunteering the next summer, but grows twice as tall and furnishes much more hay or pasture of finer quality feeding value and palatability. When cut early for hay a second growth will produce a seed crop, 350 to 600 pounds per acre. Cut hay in early bloom and rake as soon as drying permits. It dries readily and can be baled the day following harvesting. Grows well in shade of wooded pastures or orchards. Has more root nodules than Crotalaria and is 50% better for soil improvement. Does well in acid soil if not too wet. Resistant to insects, diseases, heat and drought. Makes 2-4 tons hay per acre. Seeded on Bermuda, Dallis, Carpet or other grass sods it furnishes nitrogen that is lacking in Southern soils, and doubles the growth of grass. It has 4 times more calcium, twice as much phosphorus and 2½ times as much protein as Carpet Grass. When cows graze on it their milk flow increases. Plant during spring and early summer at the rate of 10-12 lbs. per acre broadcast. Inoculate seed with Nitragin E. Write for free cultural leaflet. **Lb. 55c; 5 lbs. \$1.45.** Not prepaid: 10 lbs. \$1.55; 100 lbs. \$12.50. Write for current quantity prices when ready to buy.

WHITE DUTCH CLOVER

734 White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. It is not easy to tramp out, and restricts soil-washing and adds fertility. It is relished by all livestock.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN B. **Lb. \$1.45; 5 lbs. \$6.30.** Not prepaid: 10 lbs. \$10.25; 100 lbs. \$97.50.

IMPROVED WHITE CLOVER

722 This improved strain of Louisiana White Dutch grows much more vigorously and will last longer during the hot Summer months. Sow at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. For maximum results inoculate seeds with Nitragin "B." **¼ lb. 60c; lb. \$1.60; 5 lbs. \$7.00.** Not prepaid: 10 lbs. \$12.00; 100 lbs. \$110.00.

A Field of Alyce Clover

Louisiana S1 WHITE CLOVER

700 (Certified) was bred as an improvement of the native White Clover. This improvement was demonstrated by comparison trials which showed S1 Clover as yielding an average of 7,531 pounds of hay per acre per year as to Louisiana White Clover's 5,919 pounds and Ladino Clover's 6,920 pounds. Some of this increase in forage may be attributed to the fact that S1 Clover begins growing earlier in the fall and continues later in summer. S1 Clover survived the drought during the 1952 summer and fall. Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. Inoculate with Nitragin "B." **¼ lb. 80c; lb. \$2.40; 5 lbs. \$10.50.** Not prepaid: 10 lbs. \$18.50; 100 lbs. \$175.00.

LESPEDEZA

The Wonder Crop

Unequaled for hay, pasture and soil-building. Adapted to a wider area than any other known legume. Withstands droughts that would kill other crops. Increases the grazing capacity of pastures from twenty-five to fifty percent. Grows anywhere—on acid soils, waste lands, worn-out gravelly soils and galled hillsides where nothing else of value will grow. Reseeds itself every year, even when severely grazed, but is easily killed out by a cultivated crop. Does well in mixtures in all Southern pasture grasses.

Inoculate All Lespedeza with Nitragin "L"

For a better stand and maximum yield, inoculate your seeds with Nitragin before planting. The procedure is simple and inexpensive. Full directions on each can. 100 lb. size can **55c** postpaid.

KOBE

730 Makes the greatest growth and thrives over the entire South. It is of spreading growth, but stands up well when the stand is thick. It produces an abundance of seed which are larger than the Common. It is more drought-resistant than the Common, being deeper rooted and starts growth earlier. Recommended for the main cotton belt, or from southern Arkansas, Tennessee and coastal North Carolina south. It greatly outyields the Common for hay and pasture in this territory with the same range of distribution. If it is to be used for hay and sown alone, sow 30 to 35 pounds of seed. On permanent pasture lands where Kobe Lespedeza is to be one of the legumes in the planting mixture, sow 10 to 12 pounds to acre. It should be planted in early spring for best results. Kobe makes an abundant all-summer and fall pasture. For soil improvement Kobe should be better appreciated. Its large root system, heavy foliage growth and adaptation to poor, alkaline soils, makes it very desirable as a soil-builder. **Lb. 60c; 5 lbs. \$2.15.** For larger quantities, see price-list on page 60.

SERICEA

731 (Perennial). A wonderful, drought-resistant, permanent legume. Thrives on poor land and acid or sour land, as well as rich soil. Its root system reaches 1 to 3 feet in the soil for nourishment. Makes slow growth on poor soil for the first year, but when once established, it produces an abundance of nutritious forage that is relished by all livestock. The second-year growth each plant puts out 20 to 30 stalks from 5 to 6 feet tall, producing a better quality hay in succeeding years and gives three cuttings per season. Produces as high as 3 to 4 tons of dry hay equal to alfalfa in feeding value. The roots survive the coldest winters. May be closely grazed. A heavy yielder of seed. Reuter offers you only **re-cleaned, hulled and scarified** seed. If a seed crop is wanted, sow 4 to 5 pounds per acre in 3-ft. rows on well-prepared seed bed from February until July, the earlier the better. For hay broadcast 15 to 20 pounds per acre. Cover seed very lightly. Cultural leaflet free. Seed should be inoculated. **Lb. 75c; 5 lbs. \$3.25.** For larger quantities, see price-list on page 60.

COMMON

733 The most widely-grown variety. Does well over a wider territory than other varieties. The most important pasture legume in the South. Increases carrying capacity of pasture lands from 25 to 50%. Grows on poor soils, including acid types, and supplies grazing during the summer and fall months when most pasture plants are suffering from hot sun. On good soil will produce an excellent growth, and reaches a height of from 18 to 30 inches. The small stems of the plant make it an easily cured hay crop. Seed should be planted on a well-prepared but firm seed bed in February or March. On grazing crops sow 10 to 15 pounds per acre. When planted alone for hay crop sow 25 lbs. **Lb. \$1.00; 5 lbs. \$4.50.** For larger quantities, see price-list on page 60.

*Lespedeza Is a Popular and Highly Valued
Hay Crop.*

GREAT SOIL BUILDERS

Sericea Lespedeza

KOREAN

732 Makes larger growth than the Common, 15 to 24 inches, single plants having a spread of 3 feet; has larger leaves, furnishes pasturage **three weeks earlier.** It is highly resistant to drought, and thrives on poor, worn-out soils.

It is an annual, reseeds indefinitely although closely grazed. It is highly recommended for the upper South where the seasons are shorter and may be planted with other grasses and clovers in the spring, using from 5 to 10 pounds of seed per acre. When sown alone broadcast 25 lbs. to the acre. February and March are the best months to plant. **Lb. 50c; 5 lbs. \$1.75.** For larger quantities, see price-list on page 60.

CANE SEED

These Sorghums can be planted either alone or mixed with cowpeas and soy beans. Plant in $3\frac{1}{2}$ - to 4-foot drills, using 8 to 10 pounds per acre, or broadcast 50 to 75 pounds for forage. If sown broadcast with peas, use 25 pounds with 1 bushel of peas. Our seed is remarkably clean and of exceptional quality.

901 Black Amber. Far superior in growth and yielding qualities to the original early Amber Sorghum. Not good for syrup, but fine for early-green feed and silage. If planted early it will yield two cuttings a season. If grown with cowpeas or soy beans the quality of the hay is improved and a more balanced ration may be had. Grows 10 to 12 feet. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.60. For larger quantities, see price-list on page 60.

899 Orange Type Cane. Stalks taller and heavier than the Amber, but matures later. Yields immense crops for fodder. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.60. For larger quantities, see price-list on page 60.

SART SORGHUM for SYRUP

906 Certified Sart. While Sart is considered a good syrup producer it also is highly recommended for silage. Grows about 12 feet tall and in tests at L.S.U. produced 25 tons of silage per acre. Stalks are erect (lodging only about 5%) and have a diameter of $1\frac{1}{2}$ to 2 inches. One of the biggest advantages of Sart is its resistance to fungus disease and leaf disease. Lb. 65c; 2 lbs. \$1.25; 5 lbs. \$2.65. For larger quantities see price list on page 60.

894 Feterita. (Spur.) A distinct dwarf variety. Matures earlier and produces heavier yields than Kafir corn or Milo. Valuable for forage and fodder. It is a good crop to plant after oats or wheat because it is quick-maturing and its grain-feed value is nearly as high as corn. For hog-feed, cut grain-heads in the "dough." Soil should be prepared early for planting Feterita. Sow in 3-foot rows, 6 to 8 pounds per acre. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list on page 60.

905 Hegari. CERTIFIED. Yields 10 to 12 tons of green forage per acre. Leaves are broad, long and numerous. The uniform and upright seed heads of white grains do not shatter. The fodder is relished by all livestock because the stalks are very sweet and juicy. Grows 4 to 5 feet high. Matures in 85 to 110 days. Close spacing of 2 to 4 inches apart in the row is recommended for forage. Sow 8 to 10 lbs. per acre. Also sown broadcast for hay at the rate of 40 to 50 lbs. per acre. Stands dry weather well. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list on page 60.

904 Hegari. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities see price-list on page 60.

SAGRAIN

Grows quickly—matures in 10 to 12 weeks. A safer feed crop than corn and withstands neglect and adverse conditions. Splendid combination with Soy Beans.

Plant in $3\frac{1}{2}$ ft. rows, 8 to 10 seeds per hill every 12 inches. Cultivate a couple of times and thin out 4 to 5 stalks per hill. We do not recommend broadcast planting. Can be best harvested with a corn binder, shocked like oats until cured. Plant 10 lbs. per acre. Lb. 50c; 2 lbs. 85c; 5 lbs. \$1.75. For larger quantities, see price-list on page 60.

895 Chicken Corn. (Egyptian Wheat.) Grows tall and produces 3 to 6 stalks from a single root. When grown for grain, the tops are cut, cured, and threshed like other grains. The grain is of high feeding value. Sow 8 to 10 pounds in drills 3 feet apart, or broadcast 25 pounds per acre. Matures in 120 to 140 days. It is the cheapest and best chicken feed Lb. 50c; 2 lbs. 85c; 5 lbs. \$1.75. For larger quantities, see price-list on page 60.

891 White Kafir Corn. (Black Hull.) Very stocky and leafy; valuable for forage and grain. Drill seed thinly, like sorghum, or sow broadcast. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list on page 60.

Sart Sorghum (15 ft. tall)

Peanuts are a profitable "cash" crop. Easily grown on any soil. In addition to the nuts, the hay is superior to alfalfa as it contains more fats and is equal in protein. An excellent soil-improver. Shell the seed before planting, but where there is sufficient moisture this practice is not necessary. If planted in corn, 30 pounds will plant 4 acres; planted alone, 30 to 40 pounds in $2\frac{1}{2}$ - to 3-foot rows, dropping seed in hills 8 to 10 inches apart. Cover 1 to 2 inches deep. There is no cheaper way to improve land than by growing Cowpeas. Cowpeas can be planted any time from April until August broadcast or in drills 3 to 4 feet apart. Cultivate two or three times. Broadcast, 1 to 2 bushels are required per acre, and 2 to 3 pecks for seeding in drills. Inoculate your seed for best results.

Great HOG CROPS

CHUFAS

815 The Chufa is a species of ground-nut, most easily grown. Any land suitable for corn, cotton, or peanuts will make a bumper crop of Chufas. Plant from April until the end of June, in 2½ to 3-foot rows, dropping 3 to 5 Chufas together, 16 to 18 inches apart in the row, and cover 2 inches deep. In the fall pull up a few plants for your stock to taste, and they will then go over the entire field and will attend to the harvesting. Requires 1 to 1½ pecks to plant an acre. The crop is usually matured about September 15, and can be left in the ground until time to turn the hogs in. Lb. 70c; 2 lbs. \$1.20; 5 lbs. \$2.40. Not prepaid: 10 lbs. \$2.80; 100 lbs. \$24.00.

ARTICHOKE

816 Jerusalem or Ground. Every hog-raiser should grow Artichokes, for they come year after year, and keep the hogs in fine condition. You grow them just as you would potatoes. Cut them two eyes to the piece and plant 2 inches deep, 15 to 18 inches apart in 3- to 3½-foot rows. In the fall when they have matured, turn the hogs into the field, and they will feed on them all winter except when the ground is wet or frozen. They are more productive than potatoes. Wonderful
for Hay
and
Soil Building

SOY BEANS

PALMETTO

719 (Matures in 165 days.) It produces an excellent quality of hay; the leaves and stems are of medium size. On less fertile soil, the plants grow erect, while the branches have twining terminals. The height of plant or length of vine is approximately 6 feet. The Palmetto has produced three tons in tests at Baton Rouge. The seed is straw yellow with black hilum, and of medium size. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

MAMLOXI

704 (Matures in 130 days.) A Mammoth Yellow and Biloxi, developed by the Delta Experiment Station. It's the highest producing of all strains tested at the station, having produced above 50 bushels per acre. It is much better than Biloxi for hay, grazing, planting in corn and soil building. Shatters less than any other variety. Mamloxi is the best edible Soy Bean yet developed, and should be considered in our food production program. Sow 2 bushels per acre broadcast to produce more hay and better quality than any other upright bean. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

CLEMSON

715 (Matures in 165 days.) This variety produces an excellent quality of hay. The plants grow erect on less fertile soil, while the branches have twining terminals. Stems and leaves are of medium size. The plant or length of vine grows to a height of approximately 6 feet. The seed is of medium size with black hilum, and of a straw-yellow color. One bushel will plant 2 to 3 acres if sown in rows 2½ to 3 feet apart. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.**

716 TALL-GROWING SHATTERPROOF. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

AVOYELLES

706 (Matures in 170 days.) This type is widely and successfully grown in Louisiana. The leaves and stems are large and coarse and the plant is a semi-viny, bushy type. The seeds are dull black and slightly larger than the O-too-tans. It produces 25 to 30 bushels of seed per acre. Yields over 3 tons of cured hay per acre. Louisiana planters prefer it to the O-too-tans because the Soy Bean caterpillars show a preference for O-too-tans when both are grown in the same field. One bushel plants 2½ to 3 acres in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

-PELICAN-

705 (Matures in 145 days.) An excellent early maturing, new, yellow Soy Bean, developed by Louisiana State Department of Agriculture. It is a very strong grower with a heavy crop of foliage, making it particularly valuable as a cover crop. It is a free seeder and produces from 20 to 30 bushels of seed per acre. The seed does not scatter as readily as other varieties of Soy Beans. Pelican is the first yellow seeded Soy Bean that compares favorably with the popular Avoyelles and will, no doubt, replace same in many sections when it becomes better known. One bushel will plant 3 to 3½ acres if sown in rows 3 feet apart. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

MAMMOTH YELLOW

707 (Matures in 145 days.) Grows more than 3 feet high and can be cut with a mower. A good hay bean used by many farmers for an early hog and cattle crop. Drill in rows 3 feet wide, using ½ bushel of seed per acre, or broadcast a bushel to the acre. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** Quantity prices on page 60.

BILOXI

708 (Matures in 165 days.) For grazing, for hogging down with corn, and for soiling it is unexcelled. Best results when planted in rows 3 to 5 feet wide. Yields 10 to 15 tons of green forage per acre. Will stand wet, drought. One bushel plants 1½ to 2 acres. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** For larger quantities see price list on page 60.

O-TOO-TANS

709 (Matures in 170 days.) The most popular main-crop hay and soil-improving Soy Bean. Compared with cowpeas, one-fourth the amount of seed will produce double the amount of hay. Compared to velvet beans, it makes a better cover-crop, does not overrun trees or fences, and can be cut for hay if wanted. There is no legume that will put as much humus and nitrogen combined into the soil. Produces 4 to 6 tons of dry hay, or 10 to 15 tons of green forage per acre, and surpasses alfalfa in feed-value. When grown for seed, you can expect 15 to 20 bushels per acre. It is seldom affected by wet or dry weather. Less liable to shatter than other sorts. Plant in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. A bushel will plant 3 to 4 acres solid, or from 6 to 8 acres in corn middles. **Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75.** For larger quantities see price list on page 60.

S-100

717 (Matures 120 days.) Matures 15 to 20 days earlier than Ogden, so it can be planted as late as June. It is a high yielding variety and is uniform of medium height and stands up well, seldom shattering. The seed is small to medium in size, and of yellow color. This variety has given good performance for the past few years. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** Quantity prices on page 60.

OGDEN

711 This is a heavy yielding and non-shattering variety with heavy oil content. Yields in past seasons have been reported as high as 30 to 50 bushels per acre. Our opinion is that every Soy Bean conscious farmer should at least try this outstanding variety. **Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50.** Quantity prices on page 60.

~VELVET BEANS~

Make an enormous growth and as a soil-improver they are considered superior to cowpeas. The seed should not be planted until the ground has become warm. Plant a peck to a half bushel per acre, in rows 5 feet apart and 2½ to 3 feet apart in the row. Also grown with corn. Plant the corn in 5-foot rows and 3 feet apart in the row. The Beans are planted between the hills, and at the last working they are planted between the rows. Frequently stock is turned into the field and no attempt made to harvest the corn, or sometimes the ears are pulled from the stalks before the animals are turned in to graze. Inoculate your seed for best results.

90 DAYS EARLY SPECKLE

713 This is the most valuable and popular variety. It is very prolific and can be planted later than other sorts on account of its early maturity. Makes a wonderful growth of vines for pasturing, and is a fine soil-improver. For the good of the land, grow Velvet Beans, and for the good of the cow, grow Velvet Beans. Two pounds of Velvet Beans in the pod will be found equal for milk production to one pound of cotton-seed meal. **Lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.35.** For larger quantities see price list on page 60.

BUSH OR BUNCH

714 Grows 3 feet high. Matures in 120 days. Very popular as a green-manure crop in orchards. Best for growing in corn as the plants do not vine and weigh down the stalks. May also be grown with other crops. Easily harvested. **Lb. 65c; 2 lbs. \$1.10; 5 lbs. \$2.50.** For larger quantities, see price-list on page 60.

Every bird in every flock of breeder stock is Pullorum Tested to ZERO—which means there are NO REACTORS left in any of the flock from which ALL of Reuter's High-Quality Chicks are produced.

What does this mean? Answer—greater livability. Chicks hatched from healthy pullorum-typhoid flocks live—and pay—and while we do not make any livability guarantee—other than 100% live arrival—it is not the exception but the usual that our customers report from 90 to 100 per cent livability—substantiated by letters in our files. WHEN BUYING CHICKS DEMAND QUALITY—DON'T SETTLE FOR LESS. Cheap chicks never pay—we don't sell them. We do sell High-quality Chicks BECAUSE THE PARENTAGE BEHIND THEM IS THE BEST. Our AAA Grade Chicks are equal to most other 4A Chick offerings—our 4A Royal ROP Sired CHICKS are truly half pedigreed on the male side—and are OUR BEST.
